

Apache Lenya at the OpenExpo in Winterthur

Becompany presents Apache Lenya at the OpenExpo

Apache Lenya meets the highest expectations: The innovative Java- and XML-based enterprise CMS is an Apache Software Foundation top-level project since 2004. Its focus is on the implementation of cross media publishing solutions.

Contents can become fully effective through media-optimized distribution. Apache Lenya enables you to process contents based on their semantics. XML-based data storage and open standards are the optimal foundation for powerful, dynamic cross media publishing applications based on flexible, transparent open source components.

Visit us at the open source project booth (<http://www.openexpo.ch/openexpo-2008-zuerich/open-source-projekte/>) at the Open Expo from September 24 to 25 in Winterthur!
